

Oanh Nguyen

Fresher .NET Developer

0901137341 • HCM City • oanhnguyenhma@gmail.com • <https://www.linkedin.com/in/ngyoanh/>

OBJECTIVES

IT graduate with a solid .NET backend foundation — experienced in ASP.NET Core Web API, Entity Framework Core, and RESTful API design, with a strong grasp of OOP, SOLID principles and layered architecture. Comfortable with unit testing using xUnit and Moq, and familiar with Git and Agile workflows. Eager to contribute to real-world backend development in a professional team environment, with a commitment to clean code, continuous learning and growing alongside experienced engineers.

EDUCATION

Bachelor of Information Technology	Hoa Sen University	2026
Bachelor of Architecture	Van Lang University	2021

PROJECTS

Bookstore API - Refactored Architecture 2026

<https://github.com/oanhngy/Web-Bookstore-API-Refactor-v1>

ASP.NET Core Web API, C#, MySQL, xUnit, Moq, JWT

- Analyzed existing codebase to identify architectural pain points, defined refactoring scope and target architecture upfront - covering data flow, interface contracts and phased implementation plan
- Refactored a monolithic MVC codebase into a 3-tier layered architecture (API/ Application/ Infrastructure) across 4 separate projects, eliminating fat controllers by moving all business logic into a dedicated Service layer
- Replaced cookie-based ASP.NET Identity with stateless JWT Bearer authentication, and introduced full-interface-based DI for all Services and Repositories - replacing direct DbContext injection in controllers
- Implemented Repository pattern to abstract data access, ensuring the Application layer never depends on EF Core or MySQL directly - all cross-layer dependencies go through interfaces
- Integrated REST API endpoints with consistent JSON responses and global exception handling middleware returning structured ProblemDetails; consumed and tested all endpoints via Swagger UI
- Wrote unit tests for the Service layer using xUnit and Moq, covering business logic in isolation without database or HTTP dependencies
- Applied an iterative development workflow - defining architecture contracts and refactoring scope upfront before implementation, guided by structured spec files

Bookstore Web Application 2026

<https://github.com/oanhngy/Web-Bookstore>

ASP.NET Core MVC, C#, MySQL, Entity Framework Core

- Built a full-featured bookstore system with role-based authentication (ASP.NET Core Identity), shopping cart and a 5-state order lifecycle with business rules enforcing cancellation eligibility and Admin-only status transitions
- Implemented an Admin panel covering product, category and order management; built a revenue dashboard using Chart.js - fetching aggregated sales data from a dedicated controller action, filterable by day, week, month and year
- Managed product image uploads supporting multiple images per book with primary image selection and deletion, handling file storage alongside relational data in MySQL
- Identified architectural pain point after completion - fat controllers, no service layer, no DI abstraction, no tests - which motivated the refactored version above

WorldCup - Testing project

<https://github.com/oanhngy/Testing-WorldCup>

Java, JUnit, Maven

- Applied a test-first approach - writing JUnit test cases before implementing business logic, then writing the minimum code required to pass each test
- Wrote 200+ unit tests across 5 core components (Player, Team, Match, Goal, Tournament) and implemented integration tests to verify data flow between Service and DAO layers
- Structured the codebase to separate domain logic from data access (Services/DAOs), ensuring components were independently testable without coupling to the database

WORK EXPERIENCES

Designer & Architect, *Freelance*

Jul 2024 - Dec 2025

Gathered client requirements, managed project scopes and delivered design outputs on schedule across multiple concurrent projects - developing strong communication and stakeholder management skills.

Architect, *WA-Projects*

Jun 2023 - Feb 2024

Worked on deadline-driven projects. Collaborated across roles and adapted to changing requirements. Developed strong problem-solving skills and the ability to learn quickly in dynamic environments.

SKILLS & LANGUAGES

- **Backend:** C#, ASP.NET Core MVC, ASP.NET Core Web API, Java
- **Frontend (basic):** HTML, CSS, JavaScript
- **Database:** MySQL, Entity Framework Core (ORM), SQL Server
- **Testing:** xUnit, Moq, JUnit
- **Concepts:** OOP, SOLID, Repository Pattern, Dependency Injection, 3-Tier Architecture, MVC, Software Requirement Analysis, RESTful APIs
- **Tools:** Git, Postman, Maven, Swagger
- **Soft Skills:** Proactive self-starter, fast learner, adaptable, strong problem-solving, attention to detail, collaborative
- **English:** Upper-Intermediate - Able to read technical documentation and collaborate in team environments
